# Premium SLIMLINE BOOTs

The new "Clear" Snag Proof "Claw Design" Strain Relief is an innovative solution specifically designed with IT Professionals and High Density Data Centers in mind.

The "spring" action in the tab portion of the boot is the easiest to "press" and most durable plastic on the market.

The tab on the strain relief is designed to extend over the plug's locking tab, making it snag proof when administering patch cords. The primary strain relief of the plug locks the snag proof strain relief in place so they will not pull off, creating one, integral assembly. Once crimped, this design allows the plug's primary strain relief to relax slightly, preventing the cable pairs from being over compressed. This decrease in stress contributes to achieving peak performance.
